***Summary (Extract in french is available on our bookstore) :***

The results of many very serious scientific studies are all consistent: Ivermectin is effective, safe and with virtually no side effects to treat covid-19 at all stages of the disease.

However, against all odds, the leaders of multinational pharmaceutical companies, the political authorities of the World Health Organization and the European Union have done everything to block this treatment, leading to death hundreds of thousands of people who could have been healed and saved.

Jean-Loup Izambert, independent journalist, author of numerous books including "The virus and the President", takes us behind the scenes of this health scandal at the heart of which several French and WHO leaders are being sued in court by thousands of doctors and associations in various capacities, including concealment of scientific evidence and corruption...

***Our opinion :***

After having investigated the causes of the health crisis in France in "The virus and the President", co-written with the writer-polemicist Claude JANVIER, Jean-Loup IZAMBERT studies in "The Ivermectin scandal" the reasons which have pushed the European Union and the WHO to ignore against all expectations treatments with the drug Ivermectin, which nevertheless give promising results in some countries to treat covid-19.
